Aliases

- The alias command allows you to define new commands. Useful for creating shortcuts for longer commands. The syntax is.

```
alias alias-name=executed_command
```

Some examples:

```
alias  m=more
alias  rm="rm -i"
alias  h="history -r | more"
```

To view all current aliases:
```
alias
```

To remove a previously defined alias:
```
unalias alias_name
```
